BUILDING INSTRUCTION

## DK

HMS Victory blev søsat i 1765 fra Chatham Skibsværft, og hun blev indsat i flådens tal i 1778. Hun tjente den engelske flåde i 34 år, og deltog i det berømte "Slaget ved Trafalgar" i 1805. I 1812 blev hun pensioneret fra aktiv tjeneste, og kastede anker i Portsmouth Havn. Her lå hun i de næste 110 år, hvor udførte en række praktiske opgaver samt ceremonielle tjenester. Af frygt for at hun måske ikke vil overleve de kommende år, blev hun i 1922 flyttet til Portsmouths Royal Navy Dockyard (Flådens Skibsværft) og placeret i tørdok nummer 2. HMS Victory er det eneste overlevende skib, der kan dokumentere de mange kompetencer, som de engelske skibsignere og skibsbyggere havde i midten af det 18. århundrede.

## GB

HMS Victory was launched in 1765 at Chatham Dockyard and was commissioned in 1778. She continued in active service for the next 34 years which included her most famous moment "the Battle of Trafalgar" in 1805. In 1812 the Victory was retired from frontline duty and anchored in Portsmouth Harbour, on the south coast of England. For the next 110 years the Victory remained at her moorings in Portsmouth Harbour fulfilling a combination of practical and ceremonial roles. In 1922, amid fears for her continued survival, the Victory was moved into Portsmouth's Royal Naval Dockyard and placed in No2 Dry Dock. Her Majesty's Ship Victory is the only surviving

naval warship that represents the skill of naval dockyard shipwrights, ship designers and the industrial ability of Britain during the mid 18th century.

## D

"Die HMS Victory lief im Jahre 1765 in der Chatham Schiffswerft vom Stapel, ihren Dienst in der Marine begann sie im Jahre 1778. 34 Jahre lang segelte sie als Kriegsschiff unter der Fahne der Flotte und nahm an der berühmten Schlacht von Trafalgar 1805 teil. Im Jahre 1812 schied das Schiff aus dem Militärdienst aus und ging im Hafen von Portsmouth vor Anker. Hier war die HMS Victory fast 110 Jahre lang zu Hause, führte eine Reihe praktischer Aufgaben aus und diente als Kulisse für verschiedene Zeremonien. Als zu befürchten war, dass das Schiff die kommenden Jahre vielleicht nicht mehr überstehen würde, verfrachtete man die alte Dame im Jahre 1922 zur Portsmouths Royal Navy Dockyard (Schiffswerft der Marine) in das Trockendock Nummer 2. Die HMS Victory ist das einzige noch existierende Schiff, anhand dessen sich die große Kompetenz-Palette englischer Schiffsdesigner und -bauer des 18. Jahrhunderts dokumentieren lässt."

## F

"Le HMS Victory fut mis à l'eau en 1765 à partir du chantier naval de Chatham pour ensuite

faire partie de la flotte en 1778. Il servait la flotte anglaise pendant 34 ans et participa à la célèbre bataille de Trafalgar en 1805. Le navire fut retiré du service actif en 1812 et l'ancre jetée au port de Portsmouth. Le navire y reposait pendant les 110 années suivantes pendant lesquelles une série de tâches pratiques et des services cérémoniels furent réalisés. De crainte que le navire ne survive les années à venir, il fut déplacé au " Portsmouth Royal Navy Dockyard " (le chantier naval de la flotte) à la cale sèche numéro 2. Le HMS Victory est le seul navire survivant qui puisse documenter les nombreuses compétences que possédaient les dessinateurs et constructeurs de navires anglais au milieu du 18e siècle."

## NL

De HMS Victory werd in 1765 op de scheepswerf van Chatham te water gelaten en in 1778 ingezet door de marine. Ze diende gedurende 34 jaar de Britse vloot en speelde een belangrijke rol in de beroemde zeeslag bij Trafalgar in 1805. In 1812 werd ze uit actieve dienst gesteld en ging ze in Portsmouth voor anker waar ze vervolgens ruim honderd jaar praktische taken en ceremoniële diensten uitvoerde. Uit vrees dat ze het niet zou overleven werd ze in 1922 naar droogdok nummer 2 van de Portsmouths Royal Navy Dockyard (de scheepswerf van de marine) versleept. De HMS Victory is het enige in dienst zijnde schip dat nog getuigt van de vaardigheden van de Britse scheepsontwerpers en schepenbouwers in het midden van de 19e eeuw.

## E

El HMS Victory fue botado a mar en 1765 desde el astillero Chatham y se incorporó a la flota en 1778. Prestó sus servicios en la flota inglesa durante 34 años y participó en la famosa "Batalla de Trafalgar" en 1805. En 1812 se jubiló del servicio activo y fue fondeado en puerto Portsmouth. Allí estuvo durante los próximos 110 años, donde desempeñó una serie de ejercicios prácticos y actos ceremoniales. Por temor a que quizás no sobreviviera los años siguientes, fue trasladado en 1922 a la Royal Navy Dockyard en Portsmouths (Astillero naval), y fondeado en el Dique 2. El HMS Victory es el único buque sobreviviente que muestra pruebas de las muchas habilidades que los diseñadores y constructores de buques ingleses poseían a mediados del siglo XVIII.

## KØL OG SPANTER

Først sættes spanterne helt vinkelret på kølen. Dette gøres nemmest på en byggebedding (Billing Boats #397). Derefter monteres dæk og evt. skot. Når dette er tørt, slibes spanterne i smig, derved opnås en større limflade. Samtidig bevirker dette, at beklædningslisterne ligger langt pænere. Beklædningen af skroget kan gøres på mange måder. Vi vælger her at gøre det som følgende: Start med at lægge første liste så denne følger dækkets overkant. Der limes på hver spant samt listens underkant, og listen sættes fast med nåle. Nu kan du beklæde skroget nede efter skiftene fra side til side for at undgå skævheder pga. listernes træk. Hver enkelt liste skal skæres/slibes konisk så den følger skrogets facon, når den med et let tryk sættes på plads. Pres ikke listen på plads. Skal skroget bejdses, tør da overflødig lim væk med en fugtig klud. Når du er nået til kølen, starter du igen fra dækket og beklæder opefter. Derefter grovpudses skroget og efterlimes, hvis dette er nødvendigt. Man kan med stor fordel også påføre en primer (hvid lim tilsat en smule vand), mens man sliber skroget, da dette vil lukke små huller og revner. Dette må ikke gøres, hvis skroget skal bejdses, da lim ikke optager bejdse. Når det er tørt, kan skroget finpudses og fenderlister, rælingslister mm. påsættes.

## KEEL AND FRAMES

Position the frames at right angles to the keel. The use of a building slip simplifies this task (Billing Boats #397). Next mount the deck and bulkhead. When dry, sand the frames to taper. This ensures both a larger gluing surface and a better positioning of the planking strips. Planking the hull can be done in a number of ways. Here we have chosen to start by applying the

first strip so that it follows the upper edge of the deck. Apply glue to each frame and the upper edge of the strip, and hold the strip in place with pins until dry. Proceed planking the hull downwards, shifting from side to side in order to avoid any disalignment as the strips are applied. Each strip should be cut or sanded conically to fit the shape of the hull when gently placed on the frame. Do not force the strip into position. If the hull is to be stained, remove any excess cement with a damp cloth. When you have planked downwards to the keel, begin again from the deck and upwards. Sand the entire hull roughly, and re-glue where necessary. It can also be a good idea to apply a primer (white cement slightly diluted with water) while sanding the hull, as this will close off any small holes or cracks. This is not to be done if the hull is to be stained, as glue is stain-resistant. When dry, sand the hull again very carefully. Fender and railing strips, etc. can then be mounted.

## KIEL UND SPANTEN

Als erstes werden die Spanten winkeltrecht auf dem Kiel angebracht. Für diese Arbeit ist eine Bauhelling von Vorteil (Billing Boats #397). Danach bringen Sie die Decks und eventuelle Schotten an. Nachdem die Leimungen ausgehärtet sind werden die Spanten in Facon (Schmieg) geschliffen, dadurch erhalten Sie eine genaue Rumpfform und eine größere Leimfläche. Die Beplankung des Rumpfes kann auf verschiedene Methoden vorgenommen werden. Wir schlagen folgende Methode vor: Beginnen Sie mit der ersten Leiste in Höhe Decksoberkante. Streichen Sie die Spantabschnitte die die Leisten aufnehmen gut mit Leim ein, das gleiche gilt für die Stoßkanten der Beplankungsleisten. Überschüssiger Leim sofort mit einem feuchten

Lappen abwischen. Niemals mit Leim sparen. Die Beplankungsleisten bis zum trocknen des Leimes mit Stecknadeln, kleinen Nägel oder Wäscheklammern festheften. Beplanken Sie nun nach unten, und zwar immer eine Leiste auf der einen, sowie auf der anderen Seite, dadurch wird ein verziehen des Rumpfes vermieden. Außerdem müssen die Leisten konisch geschliffen oder geschnitten werden, da die Fläche des Hauptspantes größer als an den Bug- und Heckspanten. Niemals eine Leiste unter Spannung festsetzen. Danach das Schanzkleid beplanken, also nach oben. Jetzt kann der Rumpf grob vorgeschliffen und gespachtelt werden. Nachdem der Rumpf fertig geschliffen ist können Fenderleisten, Relingsleisten u.s.w. angebracht werden.

## QUILLE ET MEMBRURES

Positionner les couples à angle droit par rapport à la quille. L'utilisation d'un bâti de montage simplifie ce travail (Billing Boats #397). Ensuite, installer le pont et les cloisons. Après séchage, poncer les couples aux différentes inclinaisons. Ceci donnera une plus grande surface de collage et un meilleur positionnement des baguettes de coffrage. Le coffrage de la coque peut être réalisé de différentes facons. Ici nous avons choisi de commencer en appliquant la première baguette de manière qu'elle suive le bord supérieur du pont. Mettre de la colle sur chaque couple et sur le bord supérieur de chaque baguette. Maintenir les baguettes on place jusqu'au séchage complet avec des épingles. Continuer à coffrer la coque vers le bas en passant d'un côté à l'autre pour éviter de déformer la coque. Chaque baguette doit être coupée, poncée coniquement pour respecter les formes de la coque lorsqu'elle est mise en

position sur les couples. Les baguettes doivent prendre place sans forcer. Si la coque doit être vernie, il faut d'abord retirer tous les excédents de colle. Lorsque la coque a été coffrée jusqu'à la quille, recommencer à partir du pont vers le haut. Poncer soigneusement toute la coque et remettre de la colle aux endroits qui en ont besoin. On peut également diluer de la colle blanche dans de l'eau et en passer sur toute la surface de la coque, ce qui aura pour effet de renforcer les collages et de bucher les petits orifices. Mais ceci ne doit pas être effectué dans le cas d'une coque vernie, la colle deviendrait apparente et empêcherait le vernis de sécher. Après séchage de la colle, poncer à nouveau la coque. Les défenses, les balustades, etc... peuvent être montées.

## KIEL EN SPANTEN

Zorg er altijd voor dat de spanten haaks op kiel staan! Het gebruik van een bouwhelling (Billing Boats #397) vereenvoudigt deze taak. Daarna dekken en schotten aanbrengen. Als de lijm goed droog is, moeten de spanten in het verloop van de romp gevild en geschuurd worden. Hierdoor verkrijgt men een groter lijmvlak voor de huidlatten en voorkomt men het ontstaan van lelijke bulten in de romp, die er later niet meer uit te schuren zijn. Er zijn verschillende manieren om een romp te bekleden. Wij hebben ervoor gekozen om eerst vanaf het dek naar beneden te werken en daarna vanaf het dek naar boven. Begin met het aanbrengen van een huidlat op de spanten met de bovenrand van de lat gelijk met de bovenkant van het dek. Zet deze lat op de spanten vast met glaskopspelden, nog niet lijmen. Zet daarna de volgende lat met een speld vast op de middelste spant en druk hem naar voor en naar achter te-

gen de spanten. Als deze lat de bovenliggende lat ergens overlapt, dit dan met een potlood aftekenen op de onderliggende lat. Hierna beide latten verwijderen en het afgetekende gedeelte op de eerste lat verwijderen (dit heet verjongen). Nú pas de eerste lat vastlijmen en met spelden vastzetten tot de lijm goed droog is. De latten worden tegen de spanten en tegen elkaar gelijmd. Deze procedure verder volgen tot de romp dicht is. Het dichtmaken van de romp moet om en om gebeuren, d.w.z. eerst een lat links, dan een lat rechts, dan weer een links enz., dit om het kromtrekken van de romp te voorkomen. Latten die sterk gebogen moeten worden bij voorof achterstevan, kunnen het best in de stoom van een fluitketel gehouden worden tot ze soepel gebogen kunnen worden. Daarna op de romp aanbrengen, met spelden vastzetten, in vorm laten drogen en vastlijmen. Als de onderkant van de romp dicht is, de romp vanaf het dek naar de toppen van de spanten dichtmaken. Door het volgen van deze methode is het gebruiken van spijkertjes overbodig, wat als voordeel heeft dat ze later niet kunnen gaan roesten. Gebruikt U toch spijkertjes, dan moeten ze bij een varend model goed doorgeslagen worden, waarna de gaatjes met plammuur gedicht moeten worden. Als de romp helemaal dicht is kan hij glad geschuurd worden, waarna eventuele berghouten (stootranden) en potdeksels (afdeklatten op bovenste huidlat) aangebracht kunnen worden. Indien de romp gebeitst moet worden, dient overtollige lijm direct met een vochtige doek verwijderd te worden, daar opgedroogde lijm geen beits opneemt.

## QUILLA Y CUADERNAS

Primero monte las cuadernas perpendicularmente en la quilla. Esto se hace más fácilmente

en una basada de construcción (Billing Boats #397). Luego monte la cubierta y eventualmente mamparos. Una vez seco, puede achaflanar las cuadernas para obtener una superficie de encolado más grande. Al mismo tiempo los listones de forro reposan más naturalmente. Se puede efectuar el forro del casco de muchas maneras. Nosotros preferimos hacerlo de la manera siguiente: Coloque el primer listón de manera tal que siga el canto superior de la cubierta. Aplique cola a todas las cuadernas y al canto inferior del listón antes de fijar el listón con agujas. Ahora puede proceder con el revestimiento del casco hacia abajo, cambiando de un lado a otro para evitar torciones del casco como consecuencia de la tracción de los listones. Corte o esmerile cada listón cónicamente, de manera tal que siga la forma del casco al montarlo aplicando una presión ligera. No aplique demasiada presión. En el caso de que desee aplicar mordiente al casco debe remover todo exceso de cola con un trapo mojado. Cuando llegue a la quilla puede empezar de nuevo desde la cubierta hacia arriba. Luego esmerile el casco gruesamente y aplique la cola adicional necesaria. Puede ser una ventaja aplicar una imprimación (cola blanca con un poco de agua) al esmerilar el casco, ya que esto cierra las pequeñas aberturas y grietas. No debe hacer esto en el caso de que desee aplicar mordiente, ya que la cola no absorbe el mordiente. Una vez seco, puede proceder al esmerilado fino del casco y luego al montaje de los listones de defensa, de barandilla, etc.

## DÆK

Et dæk kan bearbejdes på flere måder afhængig af, hvor detaljeret du ønsker modellen skal være. Du kan nøjes med at lakere dækket og bruge det, som det er. Du kan også efter lakeringen fordybe alle stregerne på langs med en spids blyant for at markere dæksplankerne. Du kan også lime tynde lister i bredden som angivet nederst. Imellem alle listerne kan du så presse tynd rigningstråd, som skal markere kalfatringen. Derefter lakeres eller males dækket. Kahytter, skylights, nedgange m.m. bør samles og males, før disse anbringes på modellen. Da det gi'r det bedste resultat, og gør det væsentlig nemmere at komme til overalt. Desuden bør alle plastfittings vaskes af med alm. Opvaskemiddel, før disse bliver malet for at fjerne en eventuel fedtet overflade. Ved bukning af lister kan man evt. fugte listen og bukke den over et stearinlys. Alternativt kan du blødgøre listerne i 50% koldt vand og 50% 3-dobbelt salmiakspiritus i et par timer, og skylle dem i koldt vand efter denne procedure. Dette gør at listerne kan bøjes meget let. Sørg for en god udluftning, da lugten fra salmiakspiritussen er meget stærk.

## DECK

You can work with the deck in a variety of ways, depending on how detailed you wish your model to be. You can varnish the deck and use as it is. Alternatively, you can varnish the deck and use a sharp pencil to deepen the lines, thereby indicating deck planks. You can also glue thin strips on the deck and press thin rigging thread between the strips, thereby simulating caulking. The varnish or paint the deck. For the best

results, assemble and paint cabin skylights, companionways, etc. before positioning these on the model. It is a good idea to wash all plastic fittings with detergent before painting. This removes any grease from the surface. Bending strips to shape can be made easier by moistening the strip and bending it over a candle flame. You can alternatively soak the strips for a couple of hours in 50% cold water and 50% household ammonia, and rinse in plain water after this procedure. This will make the strips bend easier. Please be careful to soak the strips where you have lots of aircondition, due to the smell of the ammonia.

## DECK.

Das Deck zugestalten möchten wir gerne Ihnen überlassen, doch nicht ohne ein paar Tips an Sie weiterzugeben. Sie können das Deck lassen wie es ist, und nur lackieren. Sie können aber auch Linien mit einem harten Bleistift nachziehen, Sie erhalten dadurch eine kleine Vertiefung die wie Plankengänge aussieht. Das beste Ergebnis erzielen Sie, indem Sie dünne Leisten auf das Deck leimen. (In diesem Baukasten bereits enthalten). Zwischen die Leisten können Sie nun schwarzes Nähgarn legen, dadurch erhalten Sie eine täuschend Echte Kalfaterung. Danach das Deck lackieren. Bemalen Sie die fertig zusammengebauten Deckaufbauten vor dem plazieren an Deck. Es ist empfehlenswert den Plastik-Spritzling vor Gebrauch mit Abwaschmittel von Fett zureinigen. Leisten können Sie biegen indem Sie diese etwas befeuchten, oder über der Flamme einer Kerze erhitzen.

## PONT

Le pont pourra être réalisé de différentes façons suivant l'aspect final que l'on veut donner au modèle. On pourra simplement le vernir, ou alors après l'avoir verni tracer au feutre ou à l'encre de chine les lignes en faisant apparaître les baguettes de coffrage, on peut également utiliser de très fines baguettes pour coffrer le pont, c'est de cette dernière façon que l'on obtiendra le plus grand réalisme. Le pont sera ensuite verni ou peint. Pour obtenir un meilleur résultat, il est recommandé d'assembler et de peindre les cabines et claire-voies séparément et de les installer ensuite sur le modèle. Il est recommandé de nettoyer toutes les pièces d'accastillage en plastique avec un détergent avant de les peindre. Ceci afin d'éviter d'enlever toute trace de graisse qui empêcherait l'adhésion de la peinture. Au cas où certaines baguettes devraient être cintrées, il est recommandé de les mettre dans l'eau et ensuite de les sécher sous forme à la chaleur.

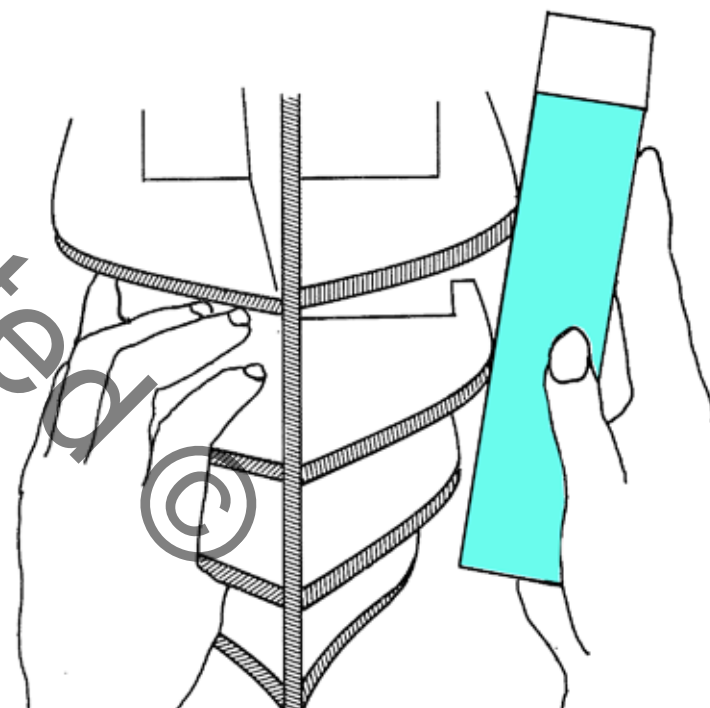

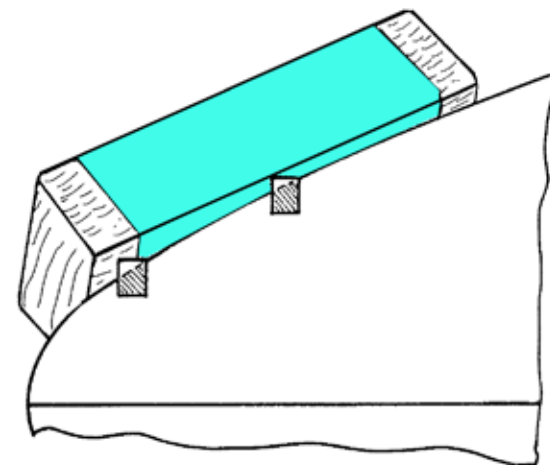

## DEK

Het dek kan, afhankelijk van Uw eigen voorkeur, op verschillende manieren afgewerkt worden. De eenvoudigste methode is om met een hard, scherp potlood de deknaden na te trekken en het dek met lak, vernis of beits te verven. Mooier is het om het dek met dunne latjes te bekleden en tussen de latjes dun garen aan te brengen om breeuwnaden te simuleren. (Fig.1). Dekhuizen, bovenlichten e.d. kunnen het beste van te voren in hun geheel samengesteld en gelakt worden; daarna pas op het dek aanbrengen. Het is een goed idee om alle plastic onderdelen vóór het lakken even in afwasmiddel schoon te maken; dit verwijderd

de vettige laag die er tijdens het productie-proc-  
es op kan komen.

## CUBIERTA

La cubierta puede trabajarse de varios modos, según el grado de precisión que desea para su modelo. Puede conformarse tan sólo con barnizarla y utilizarla tal como está. Puede también, una vez barnizada, profundizar todo el largo de las líneas con un lápiz afilado para marcar los tabloncillos de cubierta. También puede encolar listones delgados a lo ancho entre las líneas marcadas sobre la cubierta. Entre cada uno de los listones puede colocar a presión hilo de aparejo, que marcará el calafateado. Luego se procede a barnizar o pintar la cubierta. Las lumbreras de los camarotes, las bajadas, etc. deben reunirse y pintarse antes de su colocación en el modelo, ya que así se obtiene un mejor resultado y todo resulta más sencillo. Además se debe lavar todos los herrajes de plástico con detergente común antes de pintarlos, para eliminar cualquier superficie engrasada. Para el plegado de listones es posible humedecer el listón y plegarlo sobre una vela de estearina.

Exploded view diagram of a mechanical assembly. Key components and labels include:

- 136**: Top left structural component.
- 134**: Middle left structural component.
- 132**: Two locations on the left side, pointing to different parts of the frame.
- 133**: Component on the left side, near the top.
- 256**: Three locations, pointing to different parts of the central frame.
- 257**: Component on the left side, near the bottom.
- 258**: Component on the left side, near the bottom.
- 255**: Component on the left side, near the bottom.
- Strip 3x3mm**: Label for a small rectangular component.
- 120**: Component on the right side, near the bottom.
- 118**: Component on the right side, near the bottom.
- 121**: Component on the right side, near the bottom.
- 119**: Long horizontal component on the right side.
- Ø2mm**: Dimension label for a small hole or pin.

Til denne model er mahogni bejdse og farver med følgende numre nødvendige:

For this model is mahogany stain and colours with the following numbers should be used:

Für dieses Modell sind Mahagoni Beize und Farben mit den folgenden Nummern notwendig:

Pour ce modèle, le mordant et les couleurs avec les numéros suivants doivent être employées:

Voor dit model zijn kleuren met de volgende nummers nodig:

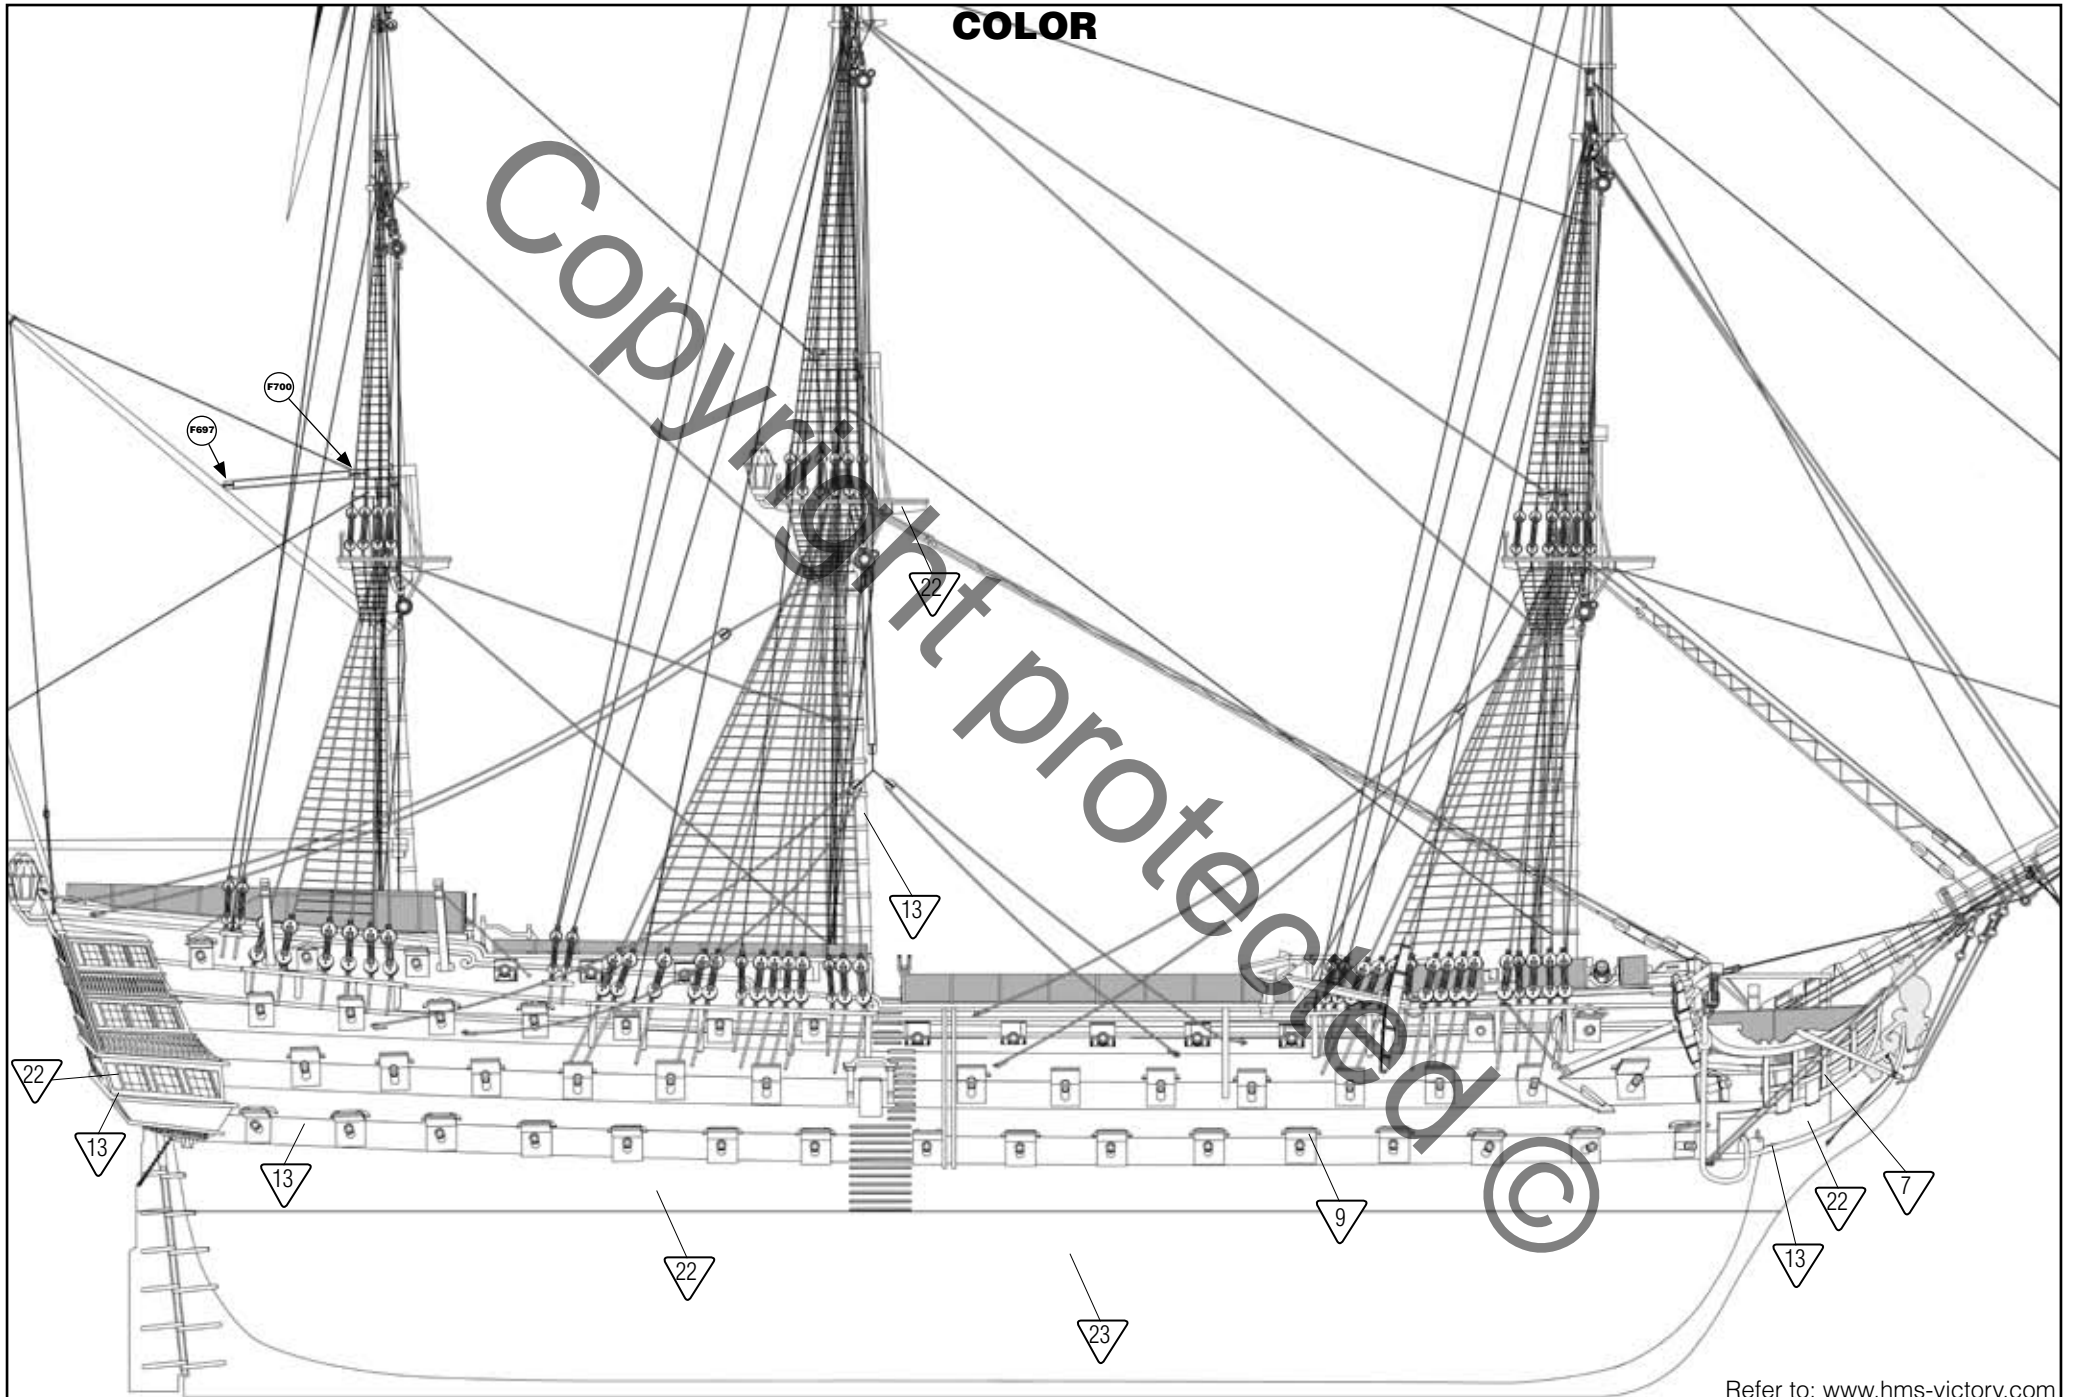

Para est modelo se necesitan mordiente et colores con los siguientes números:

Per questo modello occorrono inchiostro tinteggiatore "mogano" e colori con questi numeri:

Pinte o modelo com tintura cõr Mogno e as cõres sugeridas da Billing Boats:
